

Project Design Phase

Problem – Solution Fit Template

Date	30 September 2026
Team ID	
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	2 Marks

Problem – Solution Fit Template:

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) CS Who is your customer? - Service desk agents / incident handlers who log and update Incidents in ServiceNow - ServiceNow administrators who maintain the rules	6. CUSTOMER CONSTRAINTS CC What prevents customers from taking action? - Time pressure: manual checking of every field is easy to skip - Only built-in platform features, no extra licence or tools - Rules must work in the browser, on the form and in the list view	5. AVAILABLE SOLUTIONS AS Pros & cons of what exists today - Manual checks and reminders: no setup, but error-prone - Server-side business rules: strong, but feedback only after save and more development - Training and documents: people forget	Explore AS, differentiate
	2. JOBS-TO-BE-DONE / PROBLEMS J&P Which problems do you address? - Keep Incident records complete and valid before they are saved - Set Urgency correctly for High impact incidents - Stop accidental State changes in the list view	9. PROBLEM ROOT CAUSE RC Why does this problem exist? - Form fields are independent: nothing links Impact to Assigned To or Urgency - List view allows inline edits without validation - Data quality depends on manual effort	7. BEHAVIOUR BE What does the customer do today? - Fills Impact and Urgency by hand - Double-checks fields before saving - Asks the caller for missing details later - Edits State straight from the list	
Identify strong TR & EM	3. TRIGGERS TR What makes customers act? - A High impact incident is created or updated - Save is clicked with missing details - Reports show incomplete records	10. YOUR SOLUTION SL UI Policy and Client Scripts on Incident - UI Policy High Impact Control: Assignment group mandatory, Urgency read-only, Reverse if false onChange script: Impact = High sets Urgency = High and shows an info message onSubmit script: blocks save if Assigned To is empty onCellEdit script: blocks State edits in the list view	8.1 ONLINE CH Online actions - Works in the ServiceNow web UI: Incident form and list view - Messages appear on screen while the agent works	Extract online & offline CH of BE
	4. EMOTIONS: BEFORE / AFTER EM How do they feel? - Before: rushed, unsure the record is correct - After: confident, guided by clear messages, in control		8.2 OFFLINE CH Offline actions - Callers report issues by phone or in person; the agent logs them in the form - Verbal follow-up to collect missing details
