

Project Design Phase

Solution Architecture

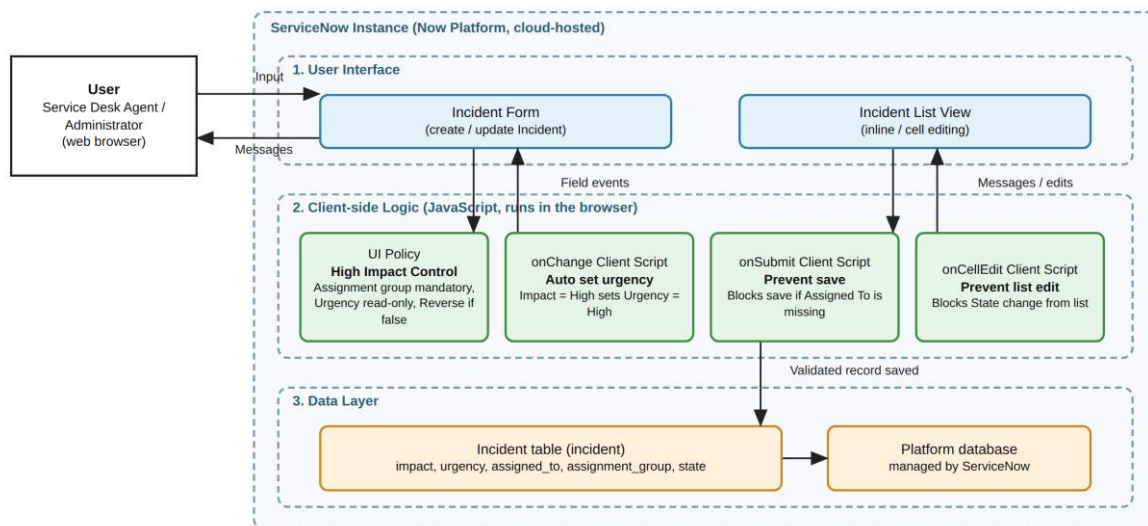

Date	30 September 2026
Team ID	
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

Solution Architecture Diagram:

Not used in this solution: external APIs, machine learning model, separate file storage.
