

Project Design Phase

Problem – Solution Fit Template

Date	30September 2026
Team ID	9100SyncSquads
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	2Marks

Problem – Solution Fit Template:

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) CS	6. CUSTOMER CONSTRAINTS CC	5. AVAILABLE SOLUTIONS AS	Explore AS, differentiate
	Who is your customer? - Service desk agents / incident handlers who log and update Incidents in ServiceNow - ServiceNow administrators who maintain the rules	What prevents customers from taking action? - Time pressure: manual checking of every field is easy to skip - Only built-in platform features, no extra licence or tools - Rules must work in the browser, on the form and in the list view	Pros & cons of what exists today - Manual checks and reminders: no setup, but error-prone - Server-side business rules: strong, but feedback only after save and more development - Training and documents: people forget	
Focus on J&P, tap into BE, understand RC	2. JOBS-TO-BE-DONE / PROBLEMS J&P	9. PROBLEM ROOT CAUSE RC	7. BEHAVIOUR BE	Focus on J&P, tap into BE, understand RC
	Which problems do you address? - Keep Incident records complete and valid before they are saved - Set Urgency correctly for High impact incidents - Stop accidental State changes in the list view	Why does this problem exist? - Form fields are independent: nothing links Impact to Assigned To or Urgency - List view allows inline edits without validation - Data quality depends on manual effort	What does the customer do today? - Fills Impact and Urgency by hand - Double-checks fields before saving - Asks the caller for missing details later - Edits State straight from the list	
Identify strong TR & EM	3. TRIGGERS TR	10. YOUR SOLUTION SL	8.1 ONLINE CH	Extract online & offline CH of BE
	What makes customers act? - A High impact incident is created or updated - Save is clicked with missing details - Reports show incomplete records		UI Policy and Client Scripts on Incident - UI Policy High Impact Control: Assignment group mandatory, Urgency read-only, Reverse if false onChange script: Impact = High sets Urgency = High and shows an info message onSubmit script: blocks save if Assigned To is empty onCellEdit script: blocks State edits in the list view	
4. EMOTIONS: BEFORE / AFTER EM			8.2 OFFLINE CH	
How do they feel? - Before: rushed, unsure the record is correct - After: confident, guided by clear messages, in control			Offline actions - Callers report issues by phone or in person; the agent logs them in the form - Verbal follow-up to collect missing details
