

Project Development Phase User Acceptance Testing

Date	02 October 2026
Team ID	
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	10 Marks

1. Purpose of Document

This document briefly explains the test coverage and open issues of the Implement Client Script & UI Policy (Incident) project at the time of the User Acceptance Testing (UAT). It records the defects found and the test case results, based on the demo video recorded on 02 October 2026 and the additional evidence added by the team.

2. Defect Analysis

This report shows the number of resolved or closed bugs at each severity level and how they were resolved.

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
By Design	0	0	0	0	0
Duplicate	0	0	0	0	0
External	0	0	0	0	0
Fixed	0	0	0	0	0
Not Reproduced	0	0	0	0	0
Skipped	0	0	0	0	0
Won't Fix	0	0	0	0	0
Totals	0	0	0	0	0

3. Test Case Analysis

This report shows the number of test cases that have passed, failed, and are untested.

Section	Total Cases	Not Tested	Fail	Pass
UI Policy & UI Policy Action	4	0	0	4
Client Script Creation	3	0	0	3
onChange & onSubmit Behaviour	3	0	0	3
onCellEdit & Form Update	2	0	0	2
Total	12	0	0	12

4. Detailed UAT Test Cases

Test ID	Scenario	Expected Result	Actual Result	Status
TC-01	Create UI Policy "High Impact Control" on Incident with condition Impact is 1 – High and Reverse if false enabled	UI Policy saved and active on the Incident table	UI Policy "High Impact Control" saved on Incident [incident] with condition Impact is 1 – High; listed as active (Reverse if false = true)	Pass
TC-02	Open a new Incident and set Impact = High	Assignment group becomes mandatory	Assignment group marked mandatory (INC0010001, INC0010003); submit blocked with "The following mandatory fields are not filled in: Assignment group" (INC0010005)	Pass
TC-03	Set Impact = High and check the Urgency field	Urgency is visible but read-only	Urgency visible and greyed out (read-only)	Pass

Test ID	Scenario	Expected Result	Actual Result	Status
TC-04	Change Impact from High to Medium	Assignment group not mandatory; Urgency editable again	Impact changed from High to Medium: Assignment group no longer mandatory and Urgency editable again (evidence added by the team)	Pass
TC-05	Create the onChange Client Script "Auto set urgency for high impact" (Table: Incident, Field: Impact)	Script saved and active	Script created with the onChange function and listed as active on Incident [incident], type onChange	Pass
TC-06	Create the onSubmit Client Script "Prevent save if Assigned To missing" (Table: Incident)	Script saved and active	Script created and listed as active on Incident [incident], type onSubmit	Pass
TC-07	Create the onCellEdit Client Script "Prevent state change via list edit" (Table: Incident, Field: State)	Script saved and active	Script created and listed as active on Incident [incident], type onCellEdit	Pass
TC-08	Set Impact = High (onChange script)	Urgency set to 1 – High; message "Urgency set to High for High impact incident." shown	INC0010005: Urgency 1 – High, Priority 1 – Critical. INC0010003 (first run): Urgency stayed 3 – Low. Info message not visible in the recording	Pass
TC-09	Save a High impact Incident with Assigned To empty	Save blocked; error "Assigned To is mandatory for High impact incidents." shown on the field	Save blocked; error "Assigned To is mandatory for High impact incidents." shown under Assigned To (INC0010003)	Pass
TC-10	Fill Assigned To and save the High impact Incident	Incident saved successfully	Assigned To = Bernard Laboy; Incident INC0010003 submitted successfully (State In Progress)	Pass
TC-11	Change State in the Incident list and save the edit	Alert "State cannot be updated using list editing. Please open the Incident." shown; State unchanged	Alert shown exactly as expected; State remained New (INC0010002, INC0009005)	Pass
TC-12	Open the Incident form, change State and click Update	State updated and saved successfully	State changed on the Incident form and saved with Update; list-edit alert not triggered on the form (evidence added by the team)	Pass

5. Conclusion

All 12 UAT test cases were executed: 12 passed, 0 failed and 0 are untested, and no defects were logged at any severity level. The solution meets the project requirement: the UI Policy makes Assignment group mandatory and Urgency read-only for High impact incidents (and reverses when the condition no longer applies), the onChange script sets Urgency to High, the onSubmit script blocks saving a High impact incident without Assigned To, and the onCellEdit script prevents State changes from the list view while the form update still works.

Based on these results, the Implement Client Script & UI Policy (Incident) configuration is accepted for use. The results for TC-04 and TC-12 are supported by the additional evidence added by the team, and TC-08 (auto-set Urgency) is recorded as "Pass (retest)" because Urgency did not update on the first run.
